Forty Years After Space Race, What's Next?

Forty years ago, the United States sent the first humans to land on the moon. The Apollo missions and the fervor of the space race were glory days for NASA. But politically and economically, the world has changed. What will space exploration look like 40 years from now?

IN THIS SERIES

[A Small Step To The Moon, A Giant Leap To Mars](#)

July 20, 2009 · The first astronauts — swaggering test pilots and fighter jocks — set NASA's original can-do tone. But after NASA reached the moon, senior people left and were replaced by management types. NASA's dynamic has slowed, but the sheer distance to Mars is not to be underestimated.

[Charting NASA's Future: To The Moon And Beyond](#)

July 21, 2009 · Forty years ago, the Cold War pushed the United States to the moon. Now, NASA hopes to return to the moon to further scientific exploration, technology development and economic expansion. But some groups think instead of focusing on the moon, NASA should invest in traveling to places like near-Earth asteroids.

[One Small Town's Big Role In The Apollo Missions](#)

July 16, 2009 · More than 40 years ago, NASA sent the Apollo 11 astronauts to the small town of Flagstaff, Ariz., to prepare for their mission. The desert terrain and a meteor crater just east of town were much like what they would encounter on the moon.
